

8K Endoscope and Japan's Medical High-Technology

Schedule: March 14-18, 2016 Site: United Arab Emirates (Dubai)

■ Dispatched expert

Toshio Chiba, M.D., Ph.D.
Professor,
Advanced Research Institute for
the Sciences and Humanities,
Nihon University
Chief Director, Medical Imaging
Consortium

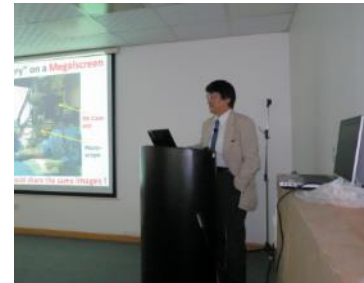

Dr. Chiba graduated from Tohoku University School of Medicine in 1975. He conducted embryonic research and clinical work in the United States, then engaged in R&D on high-precision ultrasound diagnostic systems and multi-function surgical robots, in recent years. He is currently developing 8K endoscope and microscope using high-resolution 8K motion technology.

■ Review of activities

● Rashid Hospital

● Mediclinic Welcare Hospital

● Mediclinic City Hospital

■ Achievements

Dr. Chiba gave lectures to doctors at three medical facilities in Dubai on the world's first 8K high resolution endoscope technology that combines video and advanced medical technology. Energetic lecture on diagnoses and medical care supported by high resolution images on large screen led active and fruitful discussions and questions by the audience consisting of medical and business experts and some expressed strong interest in adopting the system. Dr. Chiba explained the advantages of 8K technology in an interview with the "Khaleej Times", the English newspaper. He exchanged opinions with local experts and received advice on medical business environment in Dubai and ways now you can effectively transmit information, both of which were beneficial in building mutually constructive relationships for the future.
