### ■ Achievements

Daisuke Yano visited Azerbaijan and Oman to present lectures and hold workshops about Japanese light designing technology. At the lecture, Yano not only introduced his design works but also explained about universally recognizable characteristics of light, the uniqueness of Japanese way of light sensing, and the latest Japanese lighting technology. In the workshop, the audience observed Japanese-style lighting using lantern made with Japanese traditional style Washi paper and candle. Yano also held panel exhibition of his art works. During the visit, he exchanged opinions with architects, national and local government officials, experts associated with lighting business, and discussed possible future collaborations with them. The local media covered his visit, and newspapers as well as internet media carried his news.
