\*The figures in Miyagi are not measured because monitoring point has risk of collapsing. The monitoring result of Miyagi is available on the website of Miyagi Pref. <http://www.pref.miyagi.jp/gentai/Press/PressH230315.html>

\*Refer to other title "Readings at Monitoring Post out of 20 Km Zone of Fukushima Dai-ichi NPP" for the datas in Fukushima. It could not be measured by Monitoring Post since the radiation level around it is so high.

\*Blanks are caused by device maintenance, but the area was measured by Monitoring Posts.

\*These figures are estimated as 1 μ Gy/h=1 μ Sv/h.

\*The table was made by MEXT, based on the reports from prefectures.

\*The figures in Miyagi are not measured because monitoring point has risk of collapsing. The monitoring result of Miyagi is available on the website of <http://www.pref.miyagi.jp/gentai/Press/PressH230315.html>

\*Refer to other title "Readings at Monitoring Post out of 20 Km Zone of Fukushima Dai-ichi NPP" for the datas in Fukushima. It could not be measured by Monitoring Post since the radiation level around it is so high.

\*Blanks are caused by device maintenance, but the area was measured by Monitoring Posts.

\*These figures are estimated as  $1 \mu$  Gy/h= $1 \mu$  Sv/h.

\*The table was made by MEXT, based on the reports from prefectures.

5 μSv is the figure that a Nuclear Emergency Preparedness Manager should notify the competent minister, etc. based on Act on Special Measures Concerning Nuclear Emergency Preparedness.

These figures are estimated as 1 μGy/h=1 μSv/h

Based on "Reading of environmental radioactivity level by prefecture" collected by MEXT.

## **Sea Area Monitoring Action Plan**

March 22, 2011

MEXT

### 1. Purpose of the sea area monitoring plan

A monitoring survey will be implemented in the sea area in order to identify the status of release of radioactive substances from the Fukushima Dai-ichi Nuclear Power Station.

### 2. Sea area monitoring action plan

A research vessel of the Japan Agency for Marine-Earth Science and Technology will measure the air dose rates over and collect seawater samples from the coastal waters near the nuclear facility. The seawater samples collected will be brought back and sent to the Japan Atomic Energy Agency for analysis.

#### (Action plan)

· Measuring sites: Seawater samples will be collected in the same sea area as that subject to the conventional project for comprehensive evaluation of marine environmental radioactivity. The measuring sites will be approximately 30 km off the coast (the air dose rates will be measured; a sufficient distance away from the facility for securing the safety of the vessel crew). Seawater will be collected at eight locations running parallel to the coastline at approximately 10 km intervals, and the data will be compared with that obtained in past surveys.

### 3. Monitoring schedule

March 22, 2011 Research vessel departs

March 23, 2011 Seawater is collected

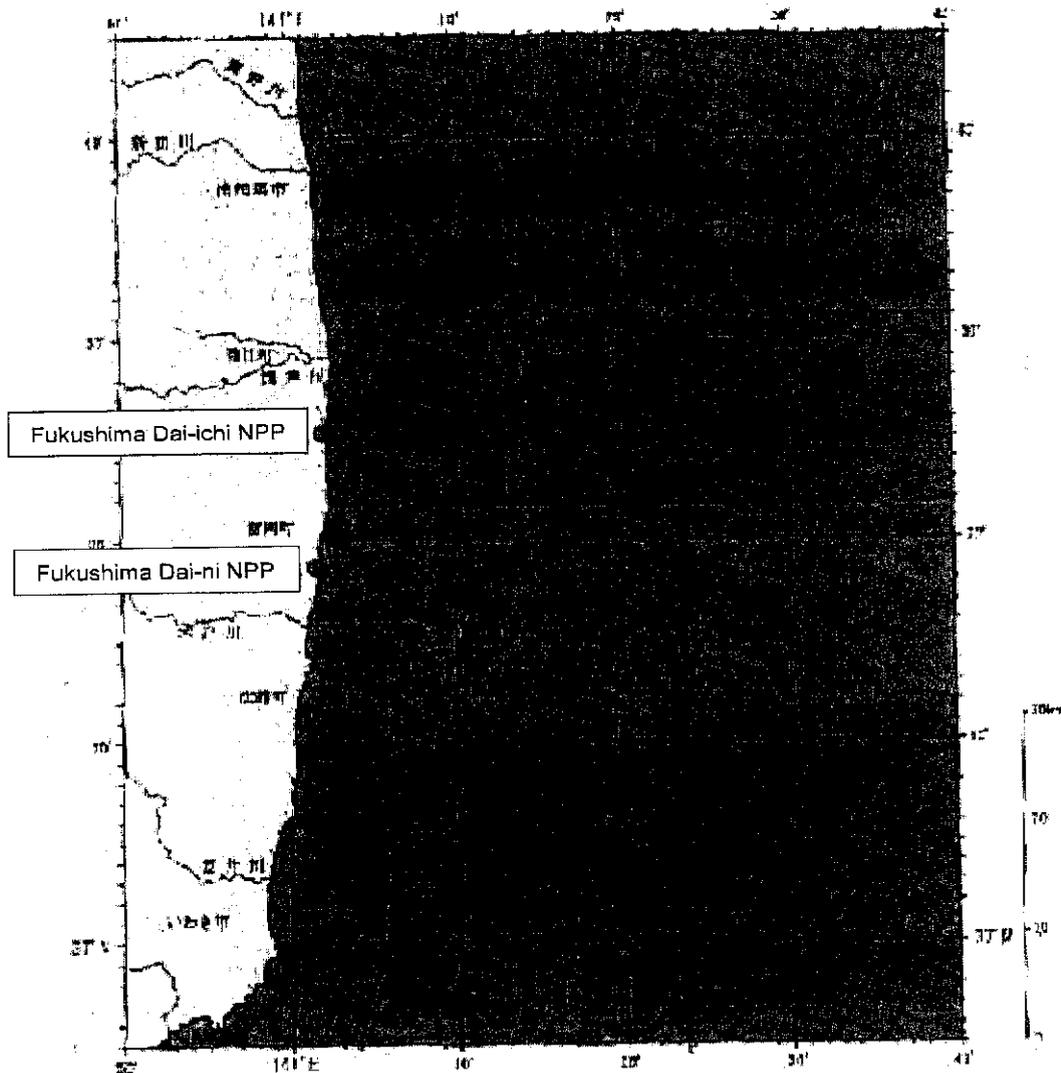

The time required for the measuring will vary depending on the concentration level, etc.

The results are planned to be released around March 24, 2011.

### 4. Monitored items

- (1) Radioactivity concentrations in the seawater
- (2) Air dose rates over the sea
- (3) Radioactivity concentrations in airborne dust over the sea
