The government requests Fukushima Prefecture to gain the readings above.

Air dose rates since April 5 are the readings of Environmental Radiation Level in emergency monitoring by Fukushima Pref.

*Blanks of ¹³²I, ¹³²Te and other detected nuclides are being confirmed.

*1: Not measured

*2 Radioactive decay is not taken into account from sampling to measurement for the radioactive concentration of the samples with measurement date and time in parentheses.

The measurement published in here is being executed by three organizations, JAEA(Japan Atomic Energy Agency), JCAC(Japan Chemical Analysis Center) and ERMCF(Environmental Radioactivity Monitoring Center of Fukushima).

Readings of soil monitoring

:the readings in this thick-frame box are new.

*Blanks of ¹²⁹mTe, ¹³²Te, ¹³⁶Cs, ¹⁴⁰La and other detected nuclides are being confirmed.

*1 For reference, the sample is collected from about 5mm of soil. (Samples are usually collected from about 5cm of soil.)

*2 Radioactive decay is not taken into account from sampling to measurement for the radioactive concentration of the samples with measurement date and time in parentheses.

*3 Radioactive concentration is deemed as a reference value due to large dead time.

The measurement published in here is being executed by three organizations, JAEA(Japan Atomic Energy Agency), JCAC(Japan Chemical Analysis Center) and ERMCF(Environmental Radioactivity Monitoring Center of Fukushima).

The government requests Fukushima Prefecture to gain the readings above.

As a general rule, samples are measured in the state of NOT washed.

Blanks of other detected nuclides are being confirmed.

*1: These are the readings of same sample in two different state, of washed and of not washed.

*2 Radioactive decay is not taken into account from sampling to measurement for the radioactive concentration of the samples with measurement date and time in

Air dose rate since April 5 are the readings of Environmental Radiation Level in emergency monitoring by Fukushima Pref.

The measurement published in here is being executed by three organizations, JAEA(Japan Atomic Energy Agency), JCAC(Japan Chemical Analysis Center) and ERMCF(Environmental Radioactivity Monitoring Center of Fukushima).

The government requests Fukushima Prefecture to gain the readings above.

Blanks of other detected nuclides are being confirmed.

*1 Radioactive decay is not taken into account from sampling to measurement for the radioactive concentration of the samples with measurement date and time in parentheses.

The measurement published in here is being executed by three organizations, JAEA(Japan Atomic Energy Agency), JCAC(Japan Chemical Analysis Center) and ERMCF(Environmental Radioactivity Monitoring Center of Fukushima).

Readings of environmental monitoring samples (Land Soil)

This table was jointly compiled by the Nuclear Safety Commission, MEXT, and the Nuclear and Industrial Safety Agency.

*1 Shown values are integrated values monitored from 6:00, March 12 through 24:00, April 21. The same estimation method as that used by the Nuclear Safety Commission on March 28, 2011 is used, whereby the values are estimated by multiplying the monitored values by 0.6 in consideration of the reduction effect of wooden buildings (0.4) when staying outdoors for eight hours and indoors for 16 hours.

*2 For locations where the monitoring was started on or after March 19, the dose data for the period from March 16 to the day before the start of monitoring has been derived by assuming that the dose has changed in proportion to changes at Location No. 32, where the steepest dose change has been observed.

*3 Shown values are the latest air dose rates monitored by the time of the press release at 10:00, April 22. As for locations [*5] where actual values have been obtained by a simple integrating dosimeter, the values are the integrated values monitored since the time of the previous data sampling divided by the time lapsed.

*4 Shown values have been obtained by the same method as that mentioned in *1, while supposing that the latest monitored values [*3] will stay unchanged on and after April 22.

*5 For the period where actual values monitored by a simple integrating dosimeter are available, such values are indicated.

To prepare the isogram map of estimated integrated doses, the values for a total of 2,138 locations were used (the 63 locations mentioned above plus the air dose monitoring locations mentioned below [2,075 locations]).

- (1) Air dose rates observed in the emergency environmental monitoring conducted by Fukushima Prefecture from March 20 to April 21: 91 locations
- (2) Air dose rates observed in monitoring conducted by MEXT on April 9 in Katsurao Village and Namie Town: 16 locations
- (3) Air dose rates observed within the area covered by the isogram map in the grid survey conducted by Fukushima Prefecture from April 12 to April 16: 1,790 locations
- (4) Air dose rates observed inside the 20 km zone in monitoring conducted by MEXT and TEPCO on March 30 and 31, and April 2, 18 and 19: 178 locations

Changes in Air Dose Rate Readings

Notes: In cases where more than one reading was taken during the six-hour period, the maximum value is plotted.
The dotted lines show estimates assumed as being proportional to the value at location 32, not measured values.
