

# Monitoring Financial flows for nutrition through the OECD/DAC Creditor Reporting System

G7, International Symposium on Food Security and Nutrition  
Tokyo, 25-26 October 2016  
Naoko Ueda  
Deputy Director  
Development Center, OECD

## Tracking nutrition through the CRS

### Suggested future improvements

- Modify coverage of CRS purpose code 12240 on *Basic Nutrition*
- Introduction of a policy marker on *Nutrition-sensitive development*
- Introduction of multiple purpose codes (2018 reporting on 2017 flows)
- Possible creation of a new field to track SDG targets

# Tracking nutrition through the CRS

## Coverage of CRS code on Basic Nutrition

**Proposal: remove school feeding and household food security from code 12240**

122	12240 modify coverage	Basic nutrition	Direct feeding programmes (maternal feeding, breastfeeding (early initiation/exclusive and continued breastfeeding) and complementary feeding child feeding ; determination of micro-nutrient deficiencies (multiple micronutrients powder); provision of vitamin A, iodine, zinc, iron/folic acid supplementation etc.; monitoring of nutritional status and provision of SAM and MAM treatment; nutrition and food hygiene education. <u><a href="#">Use code xxxxx for school feeding and household food security.</a></u>
-----	-----------------------------	-----------------	---

# Tracking nutrition through the CRS

## New policy marker on Nutrition-sensitive development

Nutrition- sensitive development	Interventions that address the underlying determinants of fetal and child nutrition and development (food security including availability of food, economic access, and use of food; adequate feeding and caregiving resources at the individual, household and community levels; and access to and use of health services and a safe and hygienic environment). These interventions must incorporate specific nutrition goals, targets and outcomes.
----------------------------------	---

## Tracking nutrition through the CRS

### Multiple purpose codes

- At present, only one purpose code can be assigned to each activity reported to the CRS.
- DAC members have agreed to implement a multiple purpose code system in the CRS, whereby an activity can, if relevant, be assigned more than one purpose code.
- Multiple purpose codes will be implemented in the CRS in 2018, and apply to the reporting of 2017 flows.

## **Tracking nutrition through the CRS**

### **Possible new field to track SDG targets**

- The 2030 Agenda for Sustainable Development calls for some adjustments to the CRS classifications.
- There is a good mapping between CRS purpose codes and several SDG goals.
- But a mapping of purpose codes and policy markers to the SDGs would likely be imprecise.
- DAC members are therefore considering a new field in the CRS to tag activities with the SDGs they support.
