

赤十字国際委員会 ICRC

1863年にジュネーブに設立された世界で最も歴史のある人道支援組織。世界中の紛争地域において、犠牲者（避難民、病人・負傷者、捕虜等）に対する、医療支援、食料・生活物資の供給等の救援活動や、収容所の訪問、国際人道法の普及活動等を実施。駐日事務所あり。

関心のある物品・サービス

- Bio medical devices and generic medicines
 - Type of medical devices:
 - Surgical Equipment: operating table, lamp and suction unit
 - Surgical instruments: external fixation, laparotomy, bone surgery sets
- Equipment: ultrasound, sphygmomanometer, syringe pump...
- Anaesthesia equipment: Pulse oxymeter, patient monitor, oxygen concentrator

Notes:

- Low-cost and basic products are required for us (unfortunately high-tech ones are not so demanded)
- Japanese companies can have their own production plant outside Japan in the region/neighboring countries where the ICRC operates, this could be of good interest
- Specific to medical devices:
 - CE-marked or FDA-approved,
 - robust, easy-to-use,
 - documentation in English is compulsory, French is a "bonus"
 - for complex machines (ex: x-ray units), possibility for installation/maintenance/training through web of local distributors,
 - we try to avoid machines that come with short shelf-life consumables,
 - we try to avoid machines that would require export licenses for shipping to countries under US embargo. That means we need to avoid as much as possible companies that are tied to US groups or that are using US-patented technologies,
 - we usually have no interest (for now) in devices with online features like remote real-time monitoring, remote patient assessment, etc
