

Organic Agriculture is a natural process of growing food and fiber without the use of synthetic fertilizers, pesticides, and other chemical inputs. It is a sustainable system that promotes the health of the soil, the environment, and the people who grow and eat the food. Organic agriculture is a natural process of growing food and fiber without the use of synthetic fertilizers, pesticides, and other chemical inputs. It is a sustainable system that promotes the health of the soil, the environment, and the people who grow and eat the food.
