[Background and current situation]  
 The sustainable development of Indonesia's society and economy requires further growth led by the private sector, which can only be achieved by an improved business and investment environment. Urgent improvement is needed in the area of transparency and stability of various legal systems (incl. tax, customs, labor, intellectual property, etc.), administrative procedures, and professional human resource development.

[Strategy]  
 Japan supports the improvement of the business and investment environment in Indonesia through institutional enhancement and capacity building for operating systems relating to taxation, customs clearance and duties, intellectual property rights, competition policy, SME promotion, human resource development, labor, tax affairs, finance, etc., based on Japan's economic policies and the private sector needs of both countries. In addition, Japan provides cooperation on industry promotion measures while promoting closer industry coordination between the two countries. In doing so, Japan ensures that the cooperative efforts remain in line with the Japan-Indonesia Economic Partnership Agreement (EPA).  
 Japan supports the cultivation of high-skilled personnel by assisting institutions committed to educational and human resource development -- with a focus on universities built by Japan in Indonesia -- enhance their capacity to cultivate human resources and conduct research that meets the economic growth stage and needs of Indonesia. Furthermore, Japan is capitalizing on the existing institutional networks between universities in Japan and ASEAN to strengthen people-to-people links between Japan and Indonesia. Japan makes contribution to achieve the SDG 4 (Education), SDG 8 (Growth and Employment), SDG 17 (Partnerships) and etc. through these policies.

Priority Area 2	Assistance for realizing a safe and fair society through balanced development	
	<p>[Background and current situation]</p> <p>In regional areas where development is lagging, there is a need to improve the infrastructure that supports livelihoods in order to enhance the quality of life. In addition, there are wide gaps between Java and the other regions in terms of population, industry, income level, and so on. In order to achieve both sustainable economic growth and social stability, it is necessary to promote balanced development and to enhance quality of life.</p>	<p>[Strategy]</p> <p>Japan is cooperating to enhance quality of life by supporting the improvement of the living environment, such as through water supply, sewerage management and waste disposal systems, and to correct regional disparities and promote balanced development by supporting local industries, such as agriculture and fisheries. In addition, Japan supports the improvement and strengthening of systems and organizations that contribute to the promotion of development in regional areas and reduction of economic disparities by utilizing the achievements of past assistance projects. Japan makes contribution to achieve the SDG 1 (Poverty), SDG 6 (Water and Hygiene), SDG 10 (Inequalities), SDG 12 (Production and Consumption), SDG 14 (Life Below Water) and etc. through these policies.</p>

**[Background and current situation]**  
 In Indonesia, natural disasters such as earthquakes, tsunamis, volcanic eruptions, floods and landslides occur frequently, and many damages occur every year. Disaster risk reduction requires initiatives that address the capacity building of Indonesia's National Disaster Management Agency (BNPB) and Regional Disaster Management Bureau (BPPD), which are responsible for disaster risk reduction administration, flood management through comprehensive water resource control, and the establishment of a system that ensures houses are earthquake-resistant. In addition, Indonesia is aiming to provide quality administrative services and realize a safe and fair society in accordance with the promise made by the current administration to deliver effective governance and to establish a clean and reliable government.

**[Strategy]**  
 Japan and Indonesia are both natural disaster-prone countries. In accordance with the decision made by the United Nations to designate the 5th of November as "World Tsunami Awareness Day," Japan and Indonesia strive to build a cooperative relationship to share our experiences and knowledge with the world based on lessons learned from the Great East Japan Earthquake of 2011 and the reconstruction efforts in the aftermath of the Indian Ocean Earthquake and Tsunami of 2004. The assistance extends focuses on improving the disaster risk reduction capability of the Jakarta metropolitan area, which is the center of Indonesia's politics and economy. Regional assistance for disaster risk reduction will be implemented while building on the relationship with the ASEAN Coordinating Center for Humanitarian Assistance on Disaster Management (AHA Center) in Jakarta and others. In addition, Japan is cooperating to strengthen the capacity and systems for improving administrative functions in various sectors, such as social security and civilian police activities, related to the creation of a safe and fair society, and to address the SDGs that engage with sustainable and balanced development in a wide range of areas. Japan makes contribution to achieve the SDG 9 (Innovation), SDG 11 (Cities), SDG 16 (Peace) and etc. through these policies.

	This program aims to realize a safe and fair society by improving disaster risk reduction capabilities in regions at high risk of disaster, such as regions where disasters occur frequently or are densely populated and have high industry concentration. In addition, the program offers assistance to improve disaster risk reduction capacity at each stage, such as prevention (preparations), emergency response, and recovery and reconstruction, with a focus on assistance for the development of disaster risk reduction infrastructure and enhancement of a comprehensive disaster risk reduction system. The program also provides assistance to train executive officers and enhance administrative capacity to ensure that citizens can enjoy quality services in the area of public safety, social security, and so on. Priority Area 3	Assistance for building capacity to address issues of the Asian region and international society
-----------------	--

<p>[Background and current situation] Indonesia's greenhouse gas (GHG) emissions are said to be the fifth largest in the world after China, the United States, India, and Russia as of 2012, when carbon dioxide emissions from deforestation, peatland degradation and other causes are included. At the COP21 of the UN Framework Convention on Climate Change held in Paris in 2015, Indonesia set itself a national goal of reducing GHG emissions by 29% by 2030, and declared climate change countermeasures as an important policy issue. Specifically, the loss of forests and the occurrence of peat fires are serious issues that need to be addressed. In addition, Indonesia also recognizes that further efforts, such as introducing energy-saving technologies, are needed to realize a low-carbon society.</p>	<p>[Strategy] In order to promote climate change mitigation and adaptation measures, Japan is supporting the improvement and development of policies and systems, government capacity building, and the introduction and development of low-carbon technologies, while also leveraging Japan's strengths. In terms of mitigation measures, Japan is supporting measures relating to forests and peatlands, energy, and transportation. Japan is also ensuring that any assistance provided is in line with the progress of bilateral cooperation frameworks, such as the Joint Crediting Mechanism. In terms of adaptation measures, Japan is cooperating with the Indonesian government on the management of water resources and introduction of agricultural insurance, among others. Japan is also cooperating on biodiversity conservation, including the effective use of biological resources. Japan makes contribution to achieve the SDG 13 (Climate Change), SDG 15 (Life on Land) and etc. through these policies.</p>

Development Issue 3-1 Response to climate change and conservation of the natural environment	The program provides assistance to create a system designed to reduce greenhouse gas emissions and reduce the negative impacts of climate change. Japan is cooperating to support the curbing of deforestation and forest degradation, peatland restoration, the promotion of high efficiency energy, energy saving, and alternative energy, a shift to public transport, an integrated management of water resources, the introduction of agricultural insurance, and so on with a focus on capacity building and the improvement and development of policies and systems. The program also offers cooperation on biodiversity conservation, including the effective use of biological resources. Development Issue  
3-2  
Response to  
issues in the Asian  
region and the  
international  
community

[Background and current situation]			[Strategy]										
As a member of the G20, Indonesia has a stronger voice in the world politics and economy, and has been proactive in addressing international and regional issues, as well as in fostering South-South cooperation. In particular, Indonesia is expected to play a leading role in policy coordination and institutional improvement within ASEAN, as well as to share its experiences of democratization with other ASEAN members.			Japan is providing assistance for capacity building in relation to maritime security and counterterrorism measures, as well as countermeasures against emergent infectious diseases, which are important not only for Indonesia but also its neighboring countries, including Japan. In addition, Japan is strengthening bilateral cooperation to address international issues, and is supporting Indonesia as a partner to improve its capacity to extend aid to other countries and become an aid donor country. Japan makes contribution to achieve the SDG 3 (Health), SDG 5 (Gender) and etc. through these policies.
