

Indicator 11.b.2

Indicator Name, Target and Goal

Indicator 11.b.2 Proportion of local governments that adopt and implement local disaster risk reduction strategies in line with national disaster risk reduction strategies (repeat of 1.5.4 and 13.1.3)

Target 11.b By 2020, substantially increase the number of cities and human settlements adopting and implementing integrated policies and plans towards inclusion, resource efficiency, mitigation and adaptation to climate change, resilience to disasters, and develop and implement, in line with the Sendai Framework for Disaster Risk Reduction 2015–2030, holistic disaster risk management at all levels

Goal 11 Make cities and human settlements inclusive, safe, resilient and sustainable

Definition and Rationale

○ Definition

This indicator measures the proportion of local governments that adopt and implement local disaster risk reduction (DRR) strategies in line with the Sendai Framework for Disaster Risk Reduction 2015-2030.

○ Concepts

DRR strategies set out goals and objectives by using specific targets and indicators in various different time frames. DRR strategies that are aimed at reducing existing disaster risks and strengthening economic and social resilience should be formulated in line with the Sendai Framework for Disaster Risk Reduction 2015-2030.

○ Rationale and Interpretation

The Target E-2 of the Sendai Framework for Disaster Risk Reduction will be used to report on this indicator.

Among the global targets of the “Sendai Framework for Disaster Risk Reduction 2015-2030” adopted at the Third UN World Conference on Disaster Risk Reduction in March 2015, “Target E: Substantially increase the number of countries with national and local disaster risk reduction strategies by 2020” will contribute to sustainable development and strengthen economic, social, health, and environmental resilience. The economic, environmental, and social perspectives would include poverty eradication, urban resilience, and climate

change adaptation.

The open-ended intergovernmental expert working group on indicators and terminology relating to disaster risk reduction (OIEWG) established by the United Nations General Assembly (resolution 69/284) has developed a set of indicators to measure global progress in the implementation of the Sendai Framework, which was endorsed by the UNGA (OIEWG report A/71/644).

Data Sources and Collection Method

Proportion of local governments that have formulated “local disaster management plans”

Method of Computation and Other Methodological Considerations

Computation Method

This indicator is calculated by dividing the number of local governments that have formulated “local disaster management plans” pursuant to Articles 40 and 42 of the Disaster Countermeasures Basic Act by the total number of local governments.
