Protecting the Bridge of Friendship between Japan and the Democratic Republic of the Congo for the Next Generation
– Maintaining Africa’s Largest Suspension Bridge –

In March of 2012, JICA began the “Project on Capacity Development for Bridge Management (Matadi).” The first thing that this project did was to send Japanese experts to the local area to conduct an investigation of the bridge with the members of OEBK. That investigation revealed that the bridge continued to be well maintained. However, it also revealed an urgent need for a basic inspection of the bridge maintenance, the formulation of a repair plan, and the fostering of younger engineers to fill the positions of the many retiring members of the initial engineering staff. This project sets its goals to construct sustainable systems and foster skills among OEBK members by establishing and updating the bridge’s maintenance plan, and compiling the long-term maintenance work in a manual.

For training in Japan, a program was set up teaching the knowledge and skills needed to maintain the special structures of suspension bridges. Mr. Joseph Kalombo, an OEBK member employed in the construction of the bridge 30 years ago, also participated in that training program.

“In Japan, I learned about the composition of the Honshu-Shikoku Bridge. Observing the bridge really helped me to understand the progress that has been made in Japanese technology. I was particularly surprised to learn about the dehumidification technology used to protect the support cables from moisture.”

Mr. Madiata, a mere worker 30 years ago when the bridge was constructed, is now the Chief of the Maintenance Bureau in charge of the bridge’s maintenance. He is currently working to maintain the bridge together with the younger generations of OEBK members. Young engineers had a hard time during the period of political instability, when they were forced to do work other than bridge maintenance. But since the restart of training by Japan, the situation has started to change.

“Thanks to the training program the Japanese are running, the young people here have started to feel passionate about their jobs. I am so glad that they have developed this new mindset towards their work. The engineers who train in Japan in particular come back with a respect for the deep spirituality, skills, and high-principled character of the Japanese. I am delighted to see the solidarity that emerge among the people who experience the training program.”

The Matadi Bridge, constructed and protected through cooperation between the people of the Democratic Republic of the Congo and Japan, is now a symbol of friendship between the two countries. Asked about his own feelings as he works now with JICA to foster the young people who will take care of this bridge into the future, Mr. Madiata commented:

“I am proud to have been involved in the construction project for this bridge. It is an extremely important asset for the future of the Democratic Republic of the Congo. I feel obligated to continue my work to preserve this bridge for as long as I can.”
